01 About

Theory.

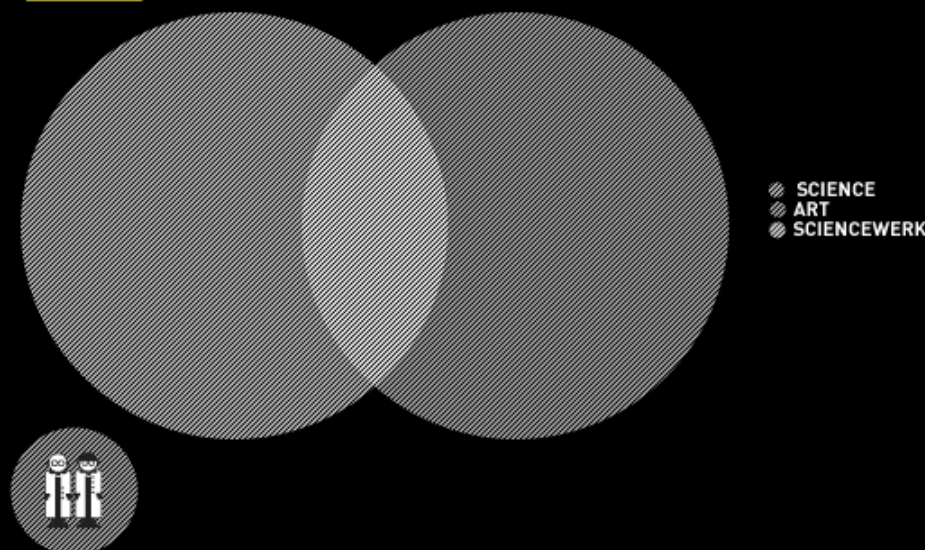

LOGIC+ AESTHETIC

(IMAGINATION + CREATIVITY + ART)
(LOGIC + KNOWLEDGE + THOUGHT)

SCIENCEWERK

X

Allocation.

Science of Design is Imagination. Everyone know what Science is and it's the part of our daily life. Sciencewerk is a concept derived from the word science itself, it's a collective work & exhibition from designers and artists around the world dedicated to the scientific issue. Think & Curious is the key.

Sciencewerk is based on the premise that design and art creates value in any aspect of life as well as Science. It's also a study of how contemporary digital artists / designers perceive the idea of science and how design may affect their perception. We are aiming to heighten understanding and appreciation to scientific topic that will always be integrated with the design / art. Underlines how seemingly a science topic may be translated into fascinating and imaginative approach. It attracts the audience to analyze a conceptual or artistic visual generated by Sciencewerk and Geniuses.

02 Clonewar Exhibition

00

Clonewar is an exhibition of the art of Biology, DNA, Society, Future, Ethics, Behavior, Moral, Religion. A distinct argument of anti clone, pro clone, or even questioning the reality through their own art. Scientifically nonsense idea as we call it frantic imagination. Brain & visual feast, altogether into one. It's the madness of science + art and whatever it is, at the end, think & curious is the key.

There are 2 categories of submission which are by invitation and public entries. You may submit your own idea about cloning, but **this will require you to do some research about what is cloning and its fact to support your idea.**

01

Format

Open Format / Medium / Style / Idea / Size.

02

Quality Control

Your idea / artwork will have to pass the quality control before it gets through the exhibition.

03

Unique Entry

Artwork submitted must not have been published somewhere.

04

Submission

Submit to submit@sciencewerk.com along with your description, title, name, and your country.

05

Deadline

Please mail us approximation date when will you submit your artwork so we can prepare the media release.

03 Research

There are several resources you can take a look into, Also, we have our own publication about cloning under the **Research section at www.sciencewerk.com/clonewar**. There you can find out the general facts about cloning and how it will affect the society in the future. We are not just talking about human cloning in reproductive way, but something more. There are good and bad consequences of this rocket science topic that you can analyze. Are humans playing god? Is it possible to save endangered species? What will you do if you have a great access to the cloning development? How about the economy abuse of the cloning development? Technology abuse? Or maybe we could live forever with this technology? We have cloned plants, are we supposed to clone mammals and humans? What's the other benefit do you think of? Do you prefer to develop the therapeutic cloning, reproductive, or both?
